

Enterprise Technology Management

Omnitza provides modern asset management and workflow automation, integrating effortlessly and rapidly with your existing IT, security and business systems.

Challenge

You use a greater variety of tools to manage your expanding and increasingly complex IT environment. While these tools serve legitimate specialized needs, they also create data and process silos. Fragmented visibility, incomplete asset inventory and piecemeal workflows increase reliance on resource-intensive manual tasks and service tickets for asset lifecycle management. Not surprisingly, IT teams tend to lag in completing strategic business projects.

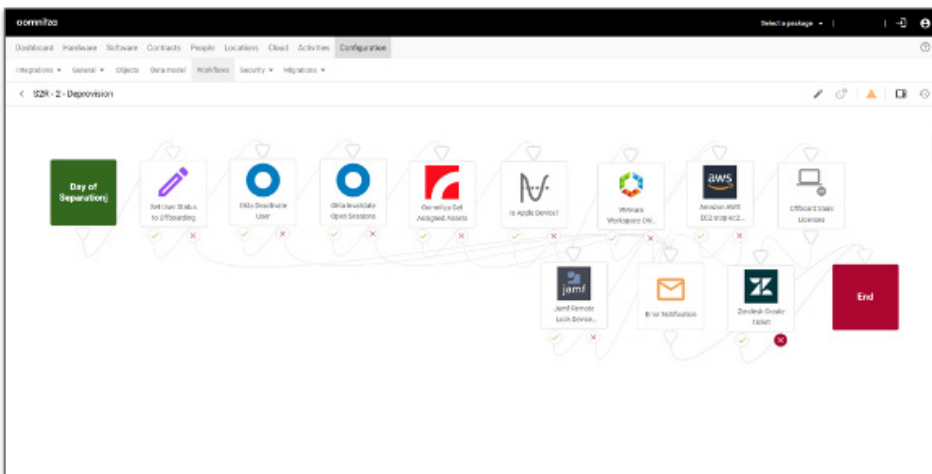

Solution

Omnitza gives you comprehensive technology visibility, asset lifecycle management and workflow automation across your entire IT environment and siloed management tools. It enables you to reduce manual tasks and service tickets, increase IT efficiency, eliminate redundant technology expenditure and improve security, compliance and audit readiness.

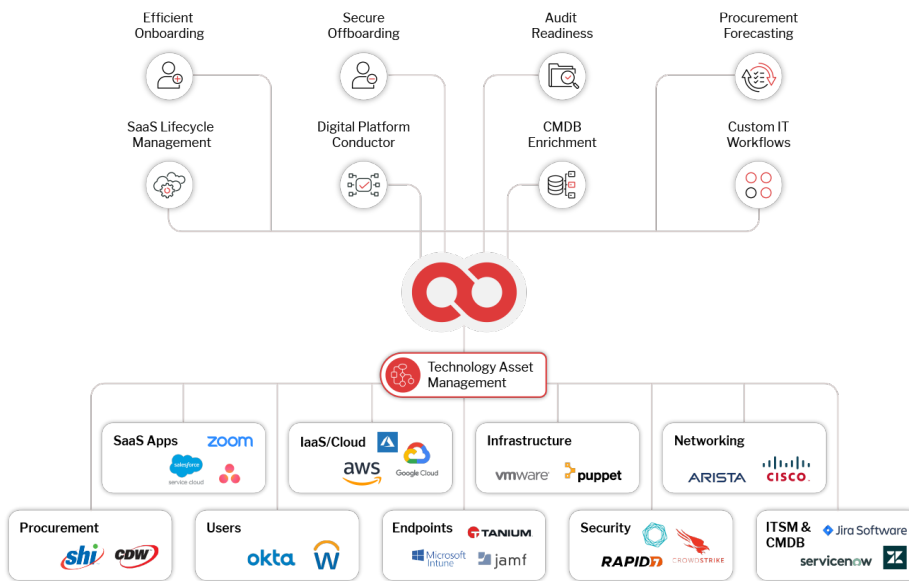

Business Outcomes

- **100%** unified & centralized technology inventory
- **63%** improvement in audit accuracy & completeness
- **45%** increase in asset reclamation at offboarding
- **70%** reduction in prep time for technology audits
- **64%** less ticket volume for asset lifecycle mgmt tasks
- **60%** reduction in onboarding time and effort
- **40%** improvement in forecasting accuracy
- **35%** savings on redundant SaaS and Cloud spend

Our agentless, SaaS solution integrates with your existing IT, security and business systems to discover, aggregate, correlate and enrich multi-source data, delivering a comprehensive, accurate and actionable asset inventory across endpoints, software/SaaS, cloud, networking and other digital assets. This enables you to improve your technology data hygiene and audit readiness.

This system of record gives you the essential foundation to confidently automate your critical IT processes using low-code/no-code workflows. Oomnitza provides standardized, pre-built workflow applications for common processes such as onboarding, offboarding, audit readiness, procurement forecasting and SaaS lifecycle management, that can easily be configured to align with your environment and processes.

Highlights

- Get visibility across your entire technology environment
- Achieve high levels of data hygiene for better decision making
- Leverage your existing IT, security and business systems
- Share asset context with your CMDB, ITSM and other tools
- Eliminate repetitive, error-prone, manual task with low-code/ no-code workflows
- Automate IT processes with standardized, pre-built applications
- Improve procurement forecasting and purchasing schedules
- Identify/remediate security gaps and be audit-ready at all times

Oomnitza's Enterprise Technology Management solution enables rapid use case implementation with tangible milestones, starting with Data Hygiene as the foundation. It delivers accelerated results in weeks, instead of undertaking long drawn-out custom projects.
